

Position of e-stops on RTGs: Each RTG is equipped with 6 different emergency-stop buttons that can be reached from the ground, three per side. Driver side there is one at the forward and rear wheel sets as well as one at the ladder for the operator to enter the machine. On the backside they are located at the forward and rear wheel sets and at the fueling station. Depending upon the model they are either directly above the wheel set or on the inside of the wheel. In the event of an emergency simply press the e-stop and it will shut down the machine. Please circulate this information with your locals.
